

Review on use of the Konstanta general-purpose carbon

10 years ago Fopro-M LLC have launched its own production based on european technologies. We produce the widest range of gaskets made of cork-rubber, rubber and paronite that can be used for engines of any cars and agricultural vehicles and produce as well repair packing designed for minor and major repair of engines.

The products of our company are certified and correspond to all quality standards in Russia.

At the present time we maintain deliveries of our products to all regions of Russia, countries of the near and far abroad.

Fopro-M LLC uses Konstanta carbon black (TC 2166-002-97792255-2007) since October 2011 as a filler for company's products. The qualitative and mechanical characteristics of the products based on carbon P-803 (2--25%) correspond to the characteristics required.

At the moment we are testing modified Konstanta carbon TC 2166-002-97792255-2007 (100%) for usage in oil and petrol resistant products. The first samples of obtained products have good results.

Since October we have no complains from our Customers.

The constant availability of required product at the facility of Jelezno LLC, good price and convenient location makes the company our reliable partner.
